

Present at Meeting:

Abdirisaq Shil, Pezhman Raeisian, Mackenzie Chase, Jeffrey Zhang, David Hennigan, Keith Allen, Gerael Boulingui

**Problems/Issues Discussed:**

1. No way to change the rating value when creating a rating on the web application.(Requirements)
2. When submitting a rating for a second time it should update the first rating instead of throwing out the second rating.
3. Rating aggregation: The most popular ratings should be the most popular unique rating (ex: bye (1-10), instead of hey (1-3) and hey (1-10) being merged), to avoid “false advertising”.
4. If you hit an existing rating just correctly, “null” is returned
5. The x button going back (Requirements)
6. The “clear” button is not working
7. New Up/Down Vote is not clear enough (Usability)
8. The Written review section has a “create rating” button (Requirements)
9. There are two “create tag” buttons on the Figma prototype (Usability)
10. The location of friends and the location of written reviews (Requirements)
11. When movies are scrolled, a few are connected to each other
